NITROX 300

NITROX 300 is a screw compressor for oxygen-enriched air applications up to a maximum percentage of 40%.

This air, with an oxygen percentage ranging from 32 to 40% is then conveyed via a flexible hose into a high-pressure compressor that will compress it in the cylinder with a filling pressure between 225 and 330 Bar.

CONTROLS AND ELECTRONICS

The newness of this new product is that NARDI COMPRESSORI has applied the concept of its TT-MIX PRO Mixing device to this compressor.

This means that gas blending normally done in manual mode is now handled by the electronic system we developed.

NITROX 300 is a plug & play NITROX Compressor, all you have to do is to select the nitrox percentage on the control screen and start the machine.

Compressor Model	Oxygen %				Power		Noise	Weight		Dimensions
Modello Compressore	% Ossigeno				Motore		Rumore	Peso		Dimensioni
Type	% O ₂	l/min	m ³ /h	CFM	HP	Kw	dB	Kg	Lbs	cm (L x W x H)
NITROX 300	40	300	18	11	10	7,5	79	240	600	113 x 80 x 98
	36	370	22	14						
	32	550	33	19
